Planner - Rob McKenna

Controller - Alasdair Wilson-Craw (NATO)

Planner's comments - Rob McKenna

It has been a hectic last couple of weeks as from a planning point of view, the two areas used for the weekend had very different problems to try and solve.

Cottonshope was quite a contrast to Edges Green and looking at the results some courses found it a lot more demanding. I tried to make good use of the wooded area as it has some very good features and although steepish is very pleasant and a delight to run in. The moorland is spoilt in places by areas of bracken which at this time of the year is starting to die away but still proves a challenge to pass through. The bracken also seems to mask the more subtle contour features found there and obscures some treacherous rock features underfoot. For this reason most of the courses were planned to avoid the worst of it.

On the day the weather was against us as on the Friday, when we were setting controls, it was a heat wave and probably too hot to run in. The views from Choux Hill on a clear are quite spectacular and worth the climb to see.

Everything didn't quite go to plan as the SI system worked a treat on the Saturday, but a few of the boxes seemed to not want to work on the Sunday. The short solution was to remove them from the courses in the results, but unfortunately this does muck up the splits and is not easy to resolve, sorry.

I would like to thank Angela and Alasdair for both standing in at rather short notice and patiently guiding me to what I hope was a set of courses that you found both challenging and enjoyable. Thanks must also go to Andrew Nichol (NATO) for looking after the computing, which was again at short notice, but what a stalwart he is. I would also like to extend my thanks to the willing team of NN helpers, particularly those that gave up their time to help get in the controls which is always appreciated after a long, hard weekend. Lastly thanks to you, the competitors, for coming and supporting this event and offering your kind comments at the finish.

Controller's comments - Alasdair Wilson-Craw (NATO)

Orienteering is a great sport. One of the attractions is the quest for a perfect run that we know is never going to happen but we keep trying. There is always some uncertainty whether we get the big route choices correct or those micro choices like which side of the bush to go around. Planning and controlling the event is very similar but we have (a bit) more time, for example to decide which control sites are well enough mapped, what courses can safely share it and whether adding it to a course makes the next leg a good one. As controller there are always dilemmas to solve as the event planning unfolds. We always hope that these are invisible to the competitor and I am glad to say that comments were very positive and the challenges of thick bracken, hidden rocks and deep ditches were taken in your stride. These reflect very well on the Planner, Rob McKenna, who made my job as Controller a pleasure rather than a chore.

One compromise that didn't work so well was the placing of the start which offered some people the choice of running through the car park. For the 'Ditch End' this was a good 30% slower but may have been a good choice for the 'Clearing'. Moving the start further uphill would have made other first controls too close. Fortunately no harm done. The area has a lot going for it and there are areas that would repay a visit one spring without the bracken, a little remapping and a higher start location. I'll be looking forward to compete over it!

Acknowledgements

Many thanks to the Army Orienteering Association for the use of the area.
